

Software Engineer

Requirements

If you'd like to be considered to join our team, here's what we're hoping to see in you:

- An advanced degree in Software Engineering or related discipline.
- 3-5 years of software development experience, preferably including large-scale telecommunications and/or networking development (SDN and NFV).
- Broad experience in JVM and distributed systems.
- Advanced capabilities in Kotlin, Java, Clojure, Javascript, and/or Python.
- Experience using Linux, Docker, and associated tools and technologies.
- Experience with agile development, continuous delivery, and deployment automation.

Although we're a fully remote team, our preference is to hire in Canada and/or the USA at this time. Our engineers are at the top of their field, we provide them with immense challenges to solve, and we compensate accordingly.

Expeto is an equal opportunity employer. Should you require accommodation in any aspect of our selection process, please contact our recruitment team at [careers \(at\) expeto \(dot\) io](mailto:careers@expeto.io).
